EDUCATION

University of North Carolina at Charlotte

Master of Science in Computer Science, Early Entry Program

Expected May 2028

University of North Carolina at Charlotte

Bachelor of Science in Computer Science

Expected May 2027

EXPERIENCE

Software Engineering Intern

May 2026 – Aug 2026

Logistics Company

Charlotte, NC

- Improved dispatch workflow efficiency across shipment scheduling and status tracking by contributing **React**, **Spring Boot**, and **MySQL** features for pickup appointments, driver availability, and delivery updates.
- Reduced scheduling conflicts during QA testing by implementing **Spring Boot** validation for overlapping pickup windows, incomplete shipment details, and driver availability constraints.
- Improved dispatcher search usability by building **React** filter components connected to **REST APIs** and optimized **MySQL** queries for shipment, appointment, and driver schedule data.
- Increased application reliability across core logistics workflows by maintaining API endpoints, testing with **Postman**, fixing QA defects, and collaborating through **GitHub pull requests** and Agile sprint tickets.

Founding Software Engineer

January – Present

Verdict – AI-Powered Equity Research Platform

Charlotte, NC

- Built a full-stack, **multi-agent** equity-research platform that generates a structured **Buy/Hold/Sell** report on any public stock in ~15 seconds, orchestrating three specialist AI agents (SEC filings, news sentiment, and financial metrics) through a **LangGraph** state machine.
- Engineered a retrieval-augmented (**RAG**) pipeline that ingests **SEC 10-K/10-Q filings** and splits each into hundreds of overlapping 1,000-character passages embedded into a **Pinecone** vector store, grounding every report in cited source text to reduce LLM hallucination.
- Streamed real-time agent progress to a **React + TypeScript** (Vite, Tailwind) frontend over **Server-Sent Events**, surfacing each agent's status live instead of blocking users on a single long request.
- Hardened a **FastAPI** backend with **API-key auth**, per-IP rate limiting, **structured JSON logging**, and graceful degradation that returns typed partial results when a data source fails, validated across 20+ tickers without pipeline failure.
- Shipped a fully **Dockerized** service backed by **52 automated tests** and per-request **OpenAI token/cost tracking**, enabling reproducible deployments and real-time visibility into LLM spend.

SKILLS

- Programming Languages:** Java, Python, JavaScript, TypeScript, C, C++, HTML/CSS, SQL
- Frameworks/Libraries:** Django, Django REST Framework, Spring Boot, React, JUnit, PyTest, Node.js, Tailwind CSS
- Applications/Tools:** Git/GitHub, GitHub Actions, Docker, AWS, Linux/Unix, Postman, REST APIs, OpenAI API, Swagger/OpenAPI
- Databases:** MySQL, PostgreSQL, SQLite, Amazon RDS
- Methodologies:** Agile, Scrum, DevOps, CI/CD, Microservices, Test-Driven Development, MVC, RESTful API Design
- Soft Skills:** Problem Solving, Communication, Time Management, Organization, Team Collaboration, Innovation, Leadership
- Languages:** English (Fluent), Arabic (Fluent)

PROJECTS

Tally – Personal Finance Tracker

In progress

Full-Stack | Java, Spring Boot, React, TypeScript, MySQL, Docker, JWT, OpenAI API

- Improved personal finance tracking across income, expenses, budgets, and categorized spending, measured by support for 4 **core financial workflows**, by building a **JWT-secured Spring Boot REST API** connected to a **React/TypeScript** frontend and **MySQL** database.
- Increased financial insight automation, measured by **AI-generated monthly spending recommendations**, by integrating the OpenAI API to analyze transaction history and return personalized budgeting feedback through a dedicated backend endpoint.

Trimly – AI-Powered Barbershop Booking Platform

May 2025 – August 2025

Full-Stack | React, Django REST Framework, PostgreSQL, MySQL, Docker, OpenAI API, Swagger/OpenAPI

- Delivered a full-stack booking platform, as measured by **13 user-facing REST endpoints** supporting authentication, availability, booking, cancellation, and rebooking, by connecting React to Django REST Framework and PostgreSQL.
- Expanded AI and deployment capabilities, as measured by a **GPT-4o-mini chatbot**, Swagger/OpenAPI documentation, and **4 containerized services**, by orchestrating React, Django, PostgreSQL, and MySQL with **Docker Compose**.

CERTIFICATIONS

- CS50's Introduction to Computer Science
- CS50's Introduction to Databases with SQL
- CS50's Web Programming with Python and JavaScript
- freeCodeCamp – Responsive Web Design Certification
- freeCodeCamp – JavaScript Algorithms and Data Structures Certification
