EDUCATION

University of North Carolina at Charlotte

Master of Science in Computer Science, Concentration in Artificial Intelligence (Early Entry)

Expected May 2028

University of North Carolina at Charlotte

Bachelor of Science in Computer Science, Concentration in Software Engineering

Expected May 2027

EXPERIENCE

AI Systems Engineer Intern

Marketeq Digital

August 2026 – Present

Remote

- Building TradeLab, an AI-native trading education and execution platform using Next.js, React, TypeScript, FastAPI, PostgreSQL, Redis, and Claude, spanning AI tutoring, fintech infrastructure, full-stack development, security, and production reliability.
- Architected and implemented a modular broker abstraction supporting a 45-broker catalog and 17 provider-validated integrations, while engineering secure execution infrastructure with idempotency, encrypted credentials, authentication refresh, rate-limit handling, reconciliation, and paper/live trading controls.
- Built full-stack brokerage and settings workflows and developed a context-aware AI trading tutor that connects Claude with lesson progress, chart state, trading activity, risk preferences, and journal history to deliver personalized educational feedback.

Software Engineering Intern

Trucking Logistics

May 2026 – August 2026

Charlotte, NC

- Improved dispatch workflow efficiency by 70% across shipment scheduling and status tracking by building React, Spring Boot, and MySQL features for pickup appointments, driver availability, and delivery updates.
- Reduced scheduling conflicts and improved dispatcher search workflows by implementing Spring Boot validation, React filtering, REST API integrations, and optimized MySQL queries for shipment and driver scheduling data.
- Increased application reliability by maintaining backend APIs, testing workflows with Postman, resolving QA defects, and contributing through GitHub pull requests and Agile sprint tickets.

Founding Software Engineer

Verdict

December 2025 – Present

Charlotte, NC

- Built a full-stack multi-agent equity research platform with LangGraph that generates Buy/Hold/Sell reports in ~15 seconds by orchestrating five specialist agents and an adversarial bull-vs-bear debate resolved by a judge model.
- Engineered a citation-grounded RAG pipeline over SEC 10-K/10-Q filings using Pinecone, and streamed real-time agent progress to a React + TypeScript frontend using Server-Sent Events.
- Hardened and Dockerized a FastAPI backend with authentication, rate limiting, structured logging, graceful degradation, LLM usage tracking, and 221 automated tests, validated across 20+ public equities without pipeline failure.

PROJECTS

Tally – Personal Finance Tracker

Full-Stack | Java, Spring Boot, React, TypeScript, MySQL, Docker, JWT, OpenAI API

June 2026 - September 2026

- Improved personal finance tracking across income, expenses, budgets, and categorized spending, measured by support for 4 core financial workflows, by building a JWT-secured Spring Boot REST API connected to a React/TypeScript frontend and MySQL database.
- Increased financial insight automation, measured by AI-generated monthly spending recommendations, by integrating the OpenAI API to analyze transaction history and return personalized budgeting feedback through a dedicated backend endpoint.

Trimly – AI-Powered Barbershop Booking Platform

Full-Stack | React, Django REST Framework, PostgreSQL, Docker, Leaflet, OpenStreetMap, Swagger/OpenAPI

May 2025 – August 2025

- Built a location-based discovery platform that geocodes city, ZIP, and current-location searches, retrieves up to 40 nearby barbers through Nominatim and Overpass, and presents synchronized list and accessible map views with filtering, directions, and open-now status.
- Engineered verified-owner claims, community reviews and enrichment, duplicate merging, moderation, rate limiting, and listing-freshness workflows; containerized the React/Django/PostgreSQL stack and validated it with 44 automated backend and frontend tests.

SKILLS

- Programming Languages:** Java, Python, JavaScript, TypeScript, C, C++, HTML/CSS, SQL
- Frameworks/Libraries:** Django, Django REST Framework, Spring Boot, FastAPI, React, JUnit, PyTest, Node.js, Tailwind CSS, Next.js, LangGraph, Jest, Mocha, Vitest, SQLAlchemy
- Applications/Tools:** Git/GitHub, GitHub Actions, Docker, AWS, Linux/Unix, Postman, Vite, REST APIs, Server-Sent Events (SSE), OpenAI API, Swagger/OpenAPI
- Databases:** MySQL, PostgreSQL, SQLite, Amazon RDS, Pinecone
- Methodologies:** Agile, Scrum, DevOps, CI/CD, Microservices, Test-Driven Development, MVC, RESTful API Design, Retrieval-Augmented Generation (RAG)
